

# INTRODUCING AIR POLISHING AT INFINITYBLU DENTAL CARE & IMPLANT CLINIC

The whiteness of teeth can be dampened by excessive consumption of tea, coffee, wine and other strong foods and colours. **Air polishing** at Infinityblu is a drill-less, pain-free and effective method of removing unwanted staining and discolouration from your teeth which can be added as an adjunct to your regular hygiene visit.

**Air Polishing – Before**

**Air Polishing – After**

**Air polishing** is a procedure which uses air and water pressure to deliver a controlled stream of specially processed non-toxic aluminium oxide powder through the hand piece nozzle. Fine particles of powders are propelled by compressed air in a warm spray and directed onto the surfaces of the teeth. This pressurized jet of air, water and powder rapidly removes surface stains, plaque and other soft deposits such as food particles trapped in between the teeth.

**Introductory** costs for Air Polishing with our Dental Hygienist are

**Mild staining £38.00**

**Moderate staining £48.50**

**Heavy/Severe staining £62.50**

Air abrasion is gentle because it generates no heat, sound, pressure or vibration. In addition, it **does not require a local anaesthetic**, making it an ideal choice for patients with stained teeth and those who experience dental anxiety. The results speak for themselves and our patients have been pleasantly surprised at how simple and easy the procedure is.
